BEGINNER GYM WORKOUT PLAN

30 DAYS TO BUILD A STRONG FOUNDATION

START SMALL. STAY CONSISTENT. GET STRONGER.

Your mission

Train your whole body 3 days per week, learn good technique, and build a sustainable habit. This plan is designed for people who are new to strength training. It is not a race to lift heavy weights.

Weekly training calendar

Day	Plan
Monday	Workout A - Full Body
Tuesday	Easy walk / mobility or rest
Wednesday	Workout B - Full Body
Thursday	Rest or gentle activity
Friday	Workout A - Full Body
Saturday	Optional fun activity / easy walk
Sunday	Rest

Week 2: B / A / B. Week 3: A / B / A. Week 4: B / A / B.

Before every workout

Warm up for 5-10 minutes with comfortable walking or cycling. Practice the first exercise with a very light weight. Choose loads you can control through the full comfortable range of motion.

WORKOUT A | Full body

Exercise	Sets x reps	Rest
Goblet squat or bodyweight squat	2 x 8-12	60-90 sec
Machine chest press or incline push-up	2 x 8-12	60-90 sec
Lat pulldown	2 x 8-12	60-90 sec
Dumbbell Romanian deadlift (light)	2 x 8-10	90 sec
Plank	2 x 15-30 sec	45-60 sec

Focus: slow, controlled reps. Stop the set if your form starts to break down.

WORKOUT B | Full body

Exercise	Sets x reps	Rest
Leg press or supported split squat	2 x 8-12	60-90 sec
Seated cable row	2 x 8-12	60-90 sec
Seated dumbbell shoulder press	2 x 8-12	60-90 sec
Glute bridge	2 x 10-15	60 sec
Dead bug	2 x 6-10 per side	45-60 sec

Technique comes first

Start with a light, manageable weight and leave around 2-3 good reps in reserve. Exhale during the effort; do not hold your breath. Ask a qualified gym trainer to demonstrate unfamiliar movements. Pain is a signal to stop, not to push through.

FORM FIRST. WEIGHT LATER.

Your 4-week progress roadmap

Week	Goal
1	Learn movement patterns. Use very light weights.
2	Repeat the workouts and improve control.
3	If all reps feel comfortable, add 1-2 reps per set.
4	If technique stays strong, make a small weight increase.

Recovery = progress

Sleep: Keep a consistent sleep schedule and get enough sleep for your age.
Food: Eat regular balanced meals with protein-rich foods, carbohydrates, fruits and vegetables.
Hydration: Drink water throughout the day, especially around exercise.
Rest: Muscles need recovery. Easy walking is fine on non-lifting days.

Beginner mistakes to avoid

Avoid maxing out, copying advanced bodybuilding splits, skipping warm-ups, adding weight too quickly, and training through sharp pain. Consistency matters more than perfection.

Simple workout tracker

Week	Sessions completed	One win this week
